

PRACHITIRTH™ Barrier Washers offer an ideal solution for sites that need to achieve a high level of hygiene by keeping soiled and clean linen completely separate so reducing any chance of infection in linen. Barrier Washers are the ideal washing solution for nursing homes, hospitals and food manufacturing sites where there is a high requirement for reducing cross contamination from linen. Barrier Washers feature a dual access system whereby soiled laundry is loaded on one side of the machine and can only be unloaded at the end of the cycle from the opposite 'clean' side of the machine.

PRACHITIRTH™ Barrier Washers with clean/unclean sides provide the ideal solution for processing laundry in retirement and care homes, hospitals and laundries. PRACHITIRTH™ Barrier Washer Extractors are designed to reduce risk of Hospital-Acquired-Infection (HAI) GMP in the hospital theatre & pharmaceutical linen laundries. The 6th generation EXE microprocessors enable a simple and easy to use control system for the user. This free-standing machine has a stainless-steel cabinet, drum and tub. The door of this machine is big enough to allow easy loading and unloading of clothes.
